DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

This application has been filed with informal drawings, which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

And

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1, 3, 5-6, 8, 10-11, 13, 15-17, 19, and 21-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Rhee et al. (5,874,500). Rhee et al. discloses the injection of mesenchymal stem cells in an acceptable pharmaceutical carrier into a joint of an animal. The mesenchymal stem cells can be allogenic to the recipient (col. 16, lines 5-21). The composition can be injected into a joint space, such as a spinal joint (intervertebral disk- col. 18, lines 49-57).

Claims 1-2, 4, 6-7, 9, 11-12, 14, 16, 18 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Peterson et al. (6,200,606 B1). Peterson et al. discloses the injection of mesenchymal stem cells in hyaluronon (col. 11, lines 29-50) (an acceptable pharmaceutical carrier) into a joint of an animal (col. 10, lines 60-61). The mesenchymal stem cells are autogenic to the recipient (col. 5, lines 20-45).

Please Note: In the MPEP,

2111.02 Weight of Preamble

PREAMBLE IS NONLIMITING UNLESS IT BREATHES LIFE AND MEANING
INTO THE CLAIM

"...a preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone."

The only differences between the preambles of the present invention's claims are the recited purposes of the processes (i.e. treating osteoarthritis).

The preamble is only directed to the purpose of the process, the steps can stand-alone and do not depend on the preamble for completeness. The claim body describes a complete invention such that the deletion of the preamble phrase does not effect the steps of the claimed invention, therefore the preamble is not limiting.

Furthermore, the prior art cited inherently treat all the claimed conditions because they perform the same methods and all the steps claimed in the present invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas C. Barrett whose telephone number is (703) 308-8295. The examiner can normally be reached Tuesday-Friday between 9:00 A.M. and 6:00 P.M.
